* Single Family Includes Villas & Half Duplexes

Definitions for Monthly Market Indicators

Active Listings

Any chart that refers to **Active listings** will include **Active, Active Contingent and Active Contingent Short Sale**. Some of the charts will show **NEW listings** for the **current month**. Other charts will show the **ALL Active** listings on the **12th** of the **current month**.

Closed Sales

Some of the charts will reflect **closed sales** for the **current month** and others will reflect **Year-to-date sales**. Monthly sales will only include the properties that are closed on the MLS by the **12th** of every month. Only Year-to-date sales are updated for sales that closed after the **12th** of the month.

Days on Market

The days on market (DOM) and cumulative days on market (CDOM) are both calculated in the MLS by Rapattoni. MLS calculates the cumulative days on market for the property continuously while it is active, until there is a break of at least 30 days. After a property is off the market for at least 30 days, the CDOM will reset back to zero. It does not reset if the listing is terminated or expired for less than 30 days or if it is picked up by a different agent. The DOM will reset back to zero anytime the listing is terminated or expired.

Median Sales Price

This is a basic measurement of home values in a market area. It is the **half way point** of the number of properties sold in a month. The current month sales will have half that sold for less than the median price and half that sold for more than the median price. This is calculated in Rapattoni by preparing a search and clicking the Statistics button.

Months Supply of Inventory

This is a way to measure how **balanced** or **unbalanced** the market is between buyers and sellers. It is expressed in the number of months it would hypothetically take to sell through all the available homes for sale, given the current levels of sales. In a **buyer's** market the number will grow **higher**, as there are fewer buyers relative to the number of homes for sale. In a **seller's** market the number is **lower**, as there are more buyers relative to the number of homes for sale.

Single Family

All charts that provide Single family data include the **property subtypes** of **Single Family, Villas Attached, and Villas Detached/Half Duplex**.

Condos

All charts that provide Condo information will include the **property subtypes** of **Low Rise, Mid Rise, High Rise and Townhouses**.

All the data in the Charts is pulled only for Lee County unless it specifically says Hendry or Glades.

Index of Charts

Single Family & Condos Sold – Page 5

This chart shows property sold year-to-date for the current month and previous 4 years of sales. It is broken out to include Single Family and Condos. The year to date total will pick up the listings that closed in the MLS after the 12th of every month.
